

Cancer screening so easy, you actually do it

Color's confidential and free service helps you better detect cancer early so you can lead a healthier life.

Ready to get started?

Visit color.com/teamsters

This benefit is available to all members and their spouse at no cost.

With Color you get (for free!)

At-home screening for colorectal, cervical, and prostate cancers

If appropriate, we'll send you simple kits you can use at home. Your care team will be available to discuss results and take next steps if needed.

A dedicated care advocate who will guide you every step of the way to get your screenings done

Care advocates can help with connecting you to Color doctors, arranging in-person screenings, and understanding potential costs.

Seamless assistance with mammograms, colonoscopies, and other screenings with in-network providers or preferred partner programs

Whatever your needs, we can order tests, find providers, make appointments, and answer questions.

At-home genetic testing and counseling to look for inherited cancer risk

Saliva-based genetic tests for BRCA, Lynch Syndrome, and additional genes related to increased cancer risk for the 8 most common hereditary cancers.

Same/next day phone or video visits with doctors with deep expertise in cancer care

Doctors can help with ordering testing, providing referrals, developing personalized care plans, and answering questions you may have about your medical care at Color and beyond.

American Cancer Society[®]

24-7 access to American Cancer Society resources and cancer information specialists

The American Cancer Society's team has deep training in cancer prevention, screening, diagnosis, treatment, and survivorship. We'll connect you to them as needed.

**We don't just save you time.
We save you money.**

\$0

Any service or test you get from Color is paid for by The Teamsters Health and Welfare Fund of Philadelphia and Vicinity at **no cost to you.**

100%

Your health insurance covers preventive screenings 100% when done with in-network providers.

\$?

Your care advocate will find treatment providers who are in-network. **This helps keep your costs as low as possible and often free.**

Being there for others starts with a simple choice: **Get screened.**

Cancer is common. 2 out of every 5 Americans will get cancer.

Early detection can save your life. Catching cancer early can more than triple survival rates.

Cancers in people younger than 50 are on the rise. Early onset colorectal cancer increased by more than 11% from 2010 to 2019.

Color members experience **life changing moments**

"You don't have to wait until you have someone in your family who has cancer or wait for someone to get sick. I look at my two sons and my husband and I want to be there to watch them grow up."

Maggie

"When my father and sister were both diagnosed, it made me think about my own health and my future with my kids. I heard about Color at work. I wanted to take advantage of the opportunity to be tested. I want to take that power and use it to my advantage."

LaKrisia

"There's things we can do now, including screening for cancer so we can treat it before it becomes a major issue. If we can have information at our fingertips, why wouldn't we?"

Brian

Frequently Asked Questions

What happens after I enroll?

After completing a short assessment, you'll receive your personal care plan and access to a dedicated care team who can assist you with cancer screenings and questions. A few days later, you will receive your Color Welcome Package, which includes at-home tests (if appropriate) and a small gift from us.

What if I've already done a Color genetic test?

You can take advantage of at-home cancer screenings and in-person scheduling support, even if you've already done a Color genetic test. After you log into your account and complete a short assessment, you can opt out of receiving another genetic test.

What happens if I have an abnormal screening result?

Cancer screening tests are designed to detect early signs of cancer or conditions that may lead to cancer. An abnormal result means that the test identified something outside of the normal range. It does not necessarily mean that cancer is present. Additional follow-up is commonly needed to better understand the result. Your care team will be available to answer any of your questions and help you receive follow-up testing to clarify your results.

How much does the Color program cost?

All at-home tests and Color care team services are generously covered by the Teamsters Health and Welfare Fund of Philadelphia and Vicinity. Any services provided by non-Color providers, like mammograms and colonoscopies, will need to be covered by your normal insurance. Your care advocate will work with you to find the most cost-effective providers for these services, with most provided at no out-of-pocket cost to you.

What if I already have a primary care provider, ob/gyn, or specialist I'm working with?

We are happy to provide wrap-around services to make it even easier for you to work with your normal care team! For example, we can save you an appointment and a co-pay by ordering your mammogram for you, and then make sure results get shared with your doctor so that they have them in their charts and can follow-up if needed.

What does the at-home genetic testing cover?

Your genetic test will analyze 29 genes—including BRCA1 and BRCA2—to help women and men understand their risk for common hereditary cancers. It will also analyze 30 genes associated with inherited heart conditions and 14 genes associated with how the body processes certain commonly prescribed medications. You will also have complimentary access to genetic counseling, in case you have any questions about your results.

Is this program useful to me if I've had cancer or if I have increased risk for cancer?

Yes! Our doctors, genetic counselors, and care advocates have deep experience in cancer care. Whether you have a question about your screening plan or are looking for more information, we are here to help.

Also, if you haven't had genetic testing, this information might be informative to your care team.
